INTERESTS

I love programming and that's one of the reasons I'm shifting to web development. Lately there's a huge demand for web applications in the digital market and I'd very much like to be a part of the team to design trend setting applications out there.

I used to code in my free time exploring different applications of coding. I started writing smaller programs and gradually started to write better code. Since then I've built several websites on my local host and as of now there's only one in the cloud (svccworks.com)

My other interests include solving rubik's cubes, playing chess, origami, trading stocks
